

Environmental Policy

Streamline Connect (Streamline) is committed to care for our environment, and that the principals of environmental sustainability must be rigorously applied in our business activities. We integrate economic, social and environmental goals in our decision-making activities and when undertaking works and services for our clients.

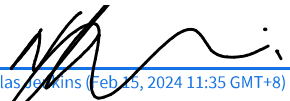

We strive to leave the environment in the same condition or better than how we found it. We commit to:

- Protect the environment, including prevention of pollution, waste reduction, consumption minimisation, protection and conservation of wildlife and natural habitats, and respecting the occupants of the areas where we work;
- Encourage environmental awareness amongst our employees, customers and other stakeholders;
- Comply with applicable legal, regulatory and contractual requirements and other requirements;
- Make continual improvement to the environmental management system to enhance performance, and communication updates;
- Manage noise and night lighting to minimise adverse impacts on properties adjoining workplaces;
- Encourage innovation and best practice in construction methodology; and
- Challenge design to ensure impact is minimised.

This policy provides a framework for setting environmental objectives and shall be communicated to all employees and be available to interested parties.
